

Child Booster Seat

Safe-n-Sound Advantage

14kg to 26kg

Child Booster Seats have traditionally been a device designed to lift children up so that they can wear a seat belt correctly and so that they can see better.

The Safe-n-Sound Advantage Booster Seat goes beyond that. It has a sturdy blow moulded base and as a result is required to be attached to an anchor point with a top tether strap. It also has an anchor point in the seat itself to enable a child safety harness to be used as an alternative to the seat belt. The Safe-n-Sound Advantage also has an exclusive anti-submarine device to prevent children from sliding off the seat.

The Safe-n-Sound Advantage Booster Seat is without doubt the safest booster seat on the market.
